NITHISH RAJ

Senior Software Engineer – DevOps | AWS | CI/CD | Infrastructure Automation

+91-904-750-9799 | nithishraj1903@gmail.com | GitHub: https://github.com/Nithishraj19

PROFESSIONAL SUMMARY

DevOps engineer with experience across AWS infrastructure, Linux, Docker, Kubernetes, Jenkins CI/CD, Terraform, automation, and monitoring. Current role at Kasplo involves work across cloud/container infrastructure, deployment workflows, messaging and data systems, SMTP/email infrastructure, and observability. Maintains a practical DevOps portfolio spanning CI/CD, AWS architecture, Kafka, monitoring, deployment strategies, high availability/disaster recovery, DevSecOps, and cost optimization.

TECHNICAL SKILLS

Cloud & IaC: AWS (EC2, VPC, IAM, ECR, EKS, ALB/NLB, S3, RDS, Route 53, CloudWatch, WAF, CloudFront), Terraform

Containers & CI/CD: Docker, Kubernetes, Amazon EKS, Jenkins, Git, GitHub, Maven, Ansible

Operating Systems & Automation: Linux, Unix, Windows, Bash, Python, system administration, troubleshooting

Networking & Application Infrastructure: DNS, TCP/IP, HTTP/HTTPS, TLS/SSL, Nginx, load balancing, SMTP

Messaging & Datastores: Kafka/AWS MSK, Redis, PostgreSQL, ClickHouse, Oracle, SQL

Monitoring & Security: Prometheus, Grafana, Alertmanager, Node Exporter, cAdvisor, Datadog, Splunk, AppDynamics, SonarQube, Gitleaks, Trivy

PROFESSIONAL EXPERIENCE

Senior Software Engineer – DevOps | Kasplo | March 2024 – Present

Work across DevOps and infrastructure activities involving AWS, Linux, Docker, Kubernetes/EKS, CI/CD, monitoring, and automation.

Support containerized application delivery workflows using Docker and Jenkins, including build, deployment, health-check, and rollback patterns where applicable.

Work with AWS services and infrastructure components including EC2, VPC, IAM, ECR, EKS, load balancers, S3, RDS, Route 53, and CloudWatch.

Contribute to observability and reliability work involving Prometheus, Grafana, Alertmanager, Datadog, and related monitoring/logging tools.

Work with messaging and data infrastructure including Kafka/MSK, Redis, PostgreSQL, and ClickHouse.

Contribute to SMTP/email infrastructure involving SMTP, GreenArrow, network load balancing, Kafka-based processing, and ingress scaling.

Use Python and Bash automation to support operational workflows and reduce repetitive manual tasks.

DevOps Engineer | Itrust Soft Solutions | January 2020 – March 2024

Project: Geo blue (as shown in previous resume)

Administered and monitored Splunk Enterprise on Linux and Windows servers, supporting infrastructure monitoring, capacity planning, and optimization.

Worked with Apache Tomcat, JBoss, WebSphere, and AppDynamics integrations for application-server monitoring.

Used SonarQube for static code analysis and supported code-quality and security reviews.

Supported Jenkins CI/CD jobs and Maven build/dependency workflows for Java applications; used Git for source control.

Worked with Docker and Kubernetes for containerized test environments and application deployment workflows.

Created and maintained Terraform configurations for AWS resources including EC2, load balancers, and S3; worked with Terraform modules and provisioners.

Used Ansible playbooks for server configuration, environment setup, and deployment automation.

Worked with AWS services including EC2, S3, RDS, Lambda, VPC, subnets, route tables, security groups, IAM, and CloudWatch alarms.

SELECTED DEVOPS PORTFOLIO

DevOps Production Platform: Jenkins, Docker, Kubernetes/Kind, Prometheus, Grafana — local-first portfolio implementation.

AWS DevOps Production Platform: Node.js health/metrics app, tests, Docker, Jenkins, and Terraform-based AWS/EKS reference architecture.

SMTP Email Infrastructure Platform: SMTP ingress, NLB, Kafka processing, GreenArrow, and observability reference architecture.

Kafka Distributed Processing Platform: Go producers/consumers, topics, partitions, consumer groups, and datastore integration concepts.

Production Observability Platform: Prometheus, Grafana, Alertmanager, exporters, Docker Compose, and Kubernetes manifests.

Blue-Green Deployment Platform: Docker Compose, Nginx traffic switching, health validation, and rollback workflow.

AWS HA/DR Platform: Multi-AZ, ALB, Auto Scaling, RDS, backup and disaster-recovery reference architecture.

DevSecOps CI/CD Platform: Test, secret/dependency/container scanning, deployment, and rollback workflow.

AWS Cost Optimization Migration Platform: Cost-analysis tooling, Docker optimization, architecture decisions, and AWS migration reference materials.

EDUCATION

Mechanical Engineering — St. Peter’s Institute of Higher Education and Research | 2015–2019
